Project Description:

Engineering, procurement, construction and installation of jackets HD1 have been successfully completed. The 1000-ton HD1 jacket is installed at shared Hengam gas-oil field, 35km south of Qeshm and near one of the drilled wells.

The project involved lifting, floating and installing operations for jackets by HL5000 crane-vessel was completed in July 2009. The operation also included piling and installation of temporary drilling platform and other accessories for jackets. After the installation of jackets and pipelines as well as the platform, the field is ready being exploited.
